Safe Systems, Inc. is a leader in providing network integration services to community banks and credit unions. The company was founded in 1993 and has worked with over 500 financial institutions across the country to provide network design, implementation, technical support, and training services.

Network Monitoring

NetComply, our premium co-managed service, offers proactive remote monitoring, preventative maintenance, remediation, and reporting for servers and other devices. Significantly minimize system downtime and free up IT resources to focus on more strategic and revenue driving initiatives. Our Network Operations Center is available help your institution remediate support issues that may arise.

Continuum

Continuum, our premium hosted disaster recovery solution provides the financial industry's leading technology in managed data protection, replication, failover, and recovery capabilities to continuously protect your business critical data and applications. Continuum also eliminates the costs, complexities, and burdens of managing your own DR failover data center

SafeSysMail

Our premium hosted email solution eliminates the burden and costs of running an in-house email server, while ensuring that your bank's or credit union's data will be compliant, protected and available at all times.

Data Vaulting

Our Data Vaulting provides a fully automated backup and recovery solution, continuously getting critical data offsite in a secure and efficient manner. Eliminate all the risks associated with taking tapes offsite and address compliance and disaster recovery pressures.

Network Design and Installation

We offer secure and effective design, project management, and installation of network systems based on our in-depth knowledge of requirements and Core Processor specifications for financial institutions. In addition, we provide network evaluations and recommendations for technology upgrades and infrastructure growth.

Network Training

Our Network Training offers the highest standards of educational services for employees on network system administration and regulatory requirements for System Administrators and Information Security Officers, including monthly webinars on technical and regulatory issues.

Security Monitoring

Hardware and software components provide the building blocks to secure your institution. However, unless these products are updated and monitored 24x7x365, their presence is less effective than

intended. Our suite of services assists your financial institution in monitoring and securing your confidential information from unauthorized access.

Compliance

We provide periodic evaluations of critical systems to monitor and report on your network's performance and review for adherence to compliance policies. Our experienced, dedicated Account Managers are assigned to you to ensure you are kept up-to-date on future technologies and significant regulatory trends. In addition, we can help you address FFIEC regulations and meet the recommended and required standards set forth by the regulatory agencies.

Business Continuity

Examiners and best business practices mandate financial institutions must be prepared for the unexpected to happen. We can enable the institution to create a solution that includes a business impact analysis, documentation of the plan, implementation of network disaster recovery, and annual testing to verify the plan is sound.
