Safe Systems®

Founded in 1993, Safe Systems® is the national leader in providing IT solutions exclusively to financial institutions. As a technology partner, we have worked with over 600 financial institutions and have managed more than 25,000 network devices. We help financial institutions significantly decrease costs, increase IT performance, enhance cybersecurity and improve compliance posture.

Recognized Leader in Providing IT Solutions to Financial Institutions Since 1993

We understand the complexity that financial institutions face in managing the constant evolution of technology and compliance. Our exceptional service combined with our innovative solutions assist our customers in staying ahead of this ever changing environment. Our solutions focus on three areas for our customers: technology, security, and compliance.

We leverage our knowledge of the financial institution software vendors to provide our customers with the best technology solutions available, all tailored to their specific applications and environment. We understand the core and third party solutions that run on your network and more importantly, the best way to configure and support them.

Cybersecurity continues to be a key factor from a risk and regulatory standpoint. We assist our customers in applying a layered defense to hackers, malware, and viruses. These layers reduce the risks associated with external and internal intrusions all while compiling a compliance audit trail of documentation, reporting and verification.

The level of care we provide to our financial institution partners is our hallmark and key differentiator. Our team of certified network engineers, our combined years
of banking knowledge and our regulatory expertise allows us to truly understand the unique platform configurations of financial institutions. Since Safe Systems is independent from your core processing provider, we offer unbiased guidance to assist your institution in making the optimal technology decisions.

Every Institution is Different

We realize that your financial institution is unique, and we strive to support the goals, priorities, and technologies of each customer. Even though you may have the same core and third party applications as other institutions, Safe Systems understands your need to have a customized solution specific to your environment. Our goal is to be a true business partner to every customer, not just another vendor.

Used by Financial Institutions Nationwide

Whether you are looking to implement a new network, upgrade equipment that can no longer satisfy your needs, automate administrative tasks with our management toolset, gain closer control over your network devices, or co-manage your servers and workstations - we can help. Our comprehensive solutions have enabled financial institutions across the country to maximize their technology investment and exceed regulatory requirements. Our reputation for offering quality solutions and the highest level of customer service are the primary drivers for our continued success. Where compliance and technology intersect, Safe Systems can help build a strong foundation for your institution's growth and long-term success.

REPORTING

Network Health Services

Maximize your staff's productivity by leveraging our industry specific NetComply service to proactively monitor, update and maintain your servers, workstations, and network devices. Whether you have a team of in-house IT experts or need assistance in managing the network, Netcomply can help.

Professional Services

We offer network design, project management, and installation services based on our in-depth knowledge of core processor and third party application specifications for financial institutions. We can assist in upgrading your systems, leveraging virtualization, or adding a new branch.

Security Monitoring

Secure your Internet connections and internal infrastructure from unauthorized access with a multi-layered 24x7x365 monitoring and management service specifically designed for financial institutions.

Compliance Services

We help institutions address FFIEC regulations through our compliance-focused services including IT Policy and Procedure Development and Management, Virtual CIO, Business Continuity Planning, Risk Assessments, and Vendor Management.

Hosted Email

SafeSysMail, our award-winning hosted email service, is a fully automated Hosted Exchange solution. Built for financial institutions, it offers encryption, SPAM, antivirus, archival, and mobile access for your employees.

Cloud Services

Migrating to the cloud can increase uptime by incorporating compliant, secure, and fully redundant systems into your business plan. Allow your IT staff to focus on projects that help drive the business rather than maintaining a complex internal network infrastructure.

Hosted Disaster Recovery and Data Backup

Enhance your institution's ability to recover from a business interruption within hours versus days with our comprehensive backup solutions designed exclusively for financial institutions.
